

What is claimed is:

1. A pattern display apparatus comprising:
a rotary or stationary display member; and
a flexible organic EL device provided on an outer surface of the rotary or stationary display member, the flexible organic EL device being capable of displaying a character, a figure, a mark and/or a pattern formed by combining some of a character, a figure and a mark.
2. A pattern display apparatus according to claim 1, wherein
the rotary display member rotates to display a variable patterning and stops to display a still patterning for a game machine.
3. A pattern display apparatus according to claim 1, wherein
the stationary display device is for POP advertisement.
4. A pattern display apparatus according to claim 1, wherein
the flexible organic EL device has a laminated structure formed by laminating at least a flexible base layer, a first electrode layer, an EL layer, a second electrode layer and a flexible sealing layer in that order.
5. A pattern display apparatus according to claim 4, wherein
an insulating layer of a predetermined pattern is provided for insulating the first electrode layer and the second electrode layer from each other in the laminated structure.
